Address of Applicant :KIET Group of Institutions, Ghaziabad ---------- ----------

(57) Abstract :
The present invention is a color scheme for load balancing resources in a hybrid cloud environment. The color scheme assigns a color to each resource type based on its load balancing capacity, which is determined based on factors such as CPU usage, memory usage, and network throughput. The color scheme is displayed in a monitoring tool that provides a visual representation of the load balancing capacity of resources in the hybrid cloud environment. By using the color scheme, cloud administrators can quickly identify which resources are underutilized or overutilized and take corrective actions to improve overall system performance and efficiency. The invention may be implemented as a computer program product, a method, or a system, and may be used in various hybrid cloud environments, such as private clouds, public clouds, or a combination of both.
