(57) Abstract :

The present invention relates to the social networking, and more specifically, to the social networks system membership qualification, communication resource distribution and related service. The system for social network expansion using IOT includes an interface circuit to couple via social networking system and described a plurality of social device, a memory storing instructions executable by the processor, a processing unit configured to receive a referral to one or more relevant IoT devices from the at least one trusted IoT device and subscribe to messages published from the one or more relevant IoT devices, and a communication module configured to communicate with at least one trusted IoT device on a home IoT network during a process to register the IoT device on the home IoT network.
