(57) Abstract :
 The present invention relates to automatic jar cleaning and washing device. The automatic jar cleaning and washing device comprising; inner water sprayer with spray adjustment, outer water sprayer with spray adjustment, pump, supportive frame structure, jar support stand, water storage tank, cleaning liquid, water heater. The cleaning liquid is poured on the surface and inside the jar. When pump gets on and the water forcefully flows internal the jar via the inner water sprayer and outer water sprayer. And then water is then gathered or thrown out via the pipe connection below the jar. Similarly, the outer portion of the jar is cleaned. The water heater is used to heat water whenever required. The inner water sprayer with spray adjustment rotates inside the jar whereas outer water sprayer with spray adjustment rotates outside the jar.
