(57) Abstract :

The present invention discloses a Fraction-Decimal-Percentage Converter Wheel comprising a base disc (101) with fractional values, a transparent disc (102) with decimal equivalents, and a top rotatable disc (103) featuring cut-out windows (104) revealing percentage values. The device includes alignment indicators (105), a central pivot mechanism (108), and color-coded zones for visual feedback. Designed for hands-on mathematical learning, it enables dynamic, simultaneous visualization and conversion among numerical formats, enhancing conceptual clarity, accessibility, and engagement across diverse educational settings.
