(57) Abstract :

Disclosed herein is a system (100) for distributed activity monitoring and issue management that comprises a user device (102) allows multiple users to access the system (100) through a user interface (104), a communication network (106) establishes a communication link for data transmission, a processing unit (108) monitors activity and manage issues which further comprises a data input module (110) receives data from the user device (102), a pre-processing module (112) handles user registration, authentication, an area creation module (114) creates defined areas, an assignment module (116) assigns king to a defined area, an activity logging module (118) records daily activity information associated with defined area, an issue reporting module (120) receives issue reports associated within defined area, an issue management module (122) manages and track reported issues until resolution, an administrative review module (124) reviews multiple defined areas, activity, and issue status, an output module (128) displays the outputs.
